

$E^* \rightarrow E\pi^0$ update

$\Xi^* \rightarrow \Xi\pi^0$ update

- Inclusion of hybrid method for accidental subtraction
- Addressing various comments and suggestions

Reaction

$$\gamma p \rightarrow K^+ K^+ \bar{E}^- \pi^0,$$

$$\bar{E}^- \rightarrow \Lambda \pi$$

$$\Lambda \rightarrow p \pi^-$$

where
and

Reaction

$$\gamma p \rightarrow K^+ K^+ \Xi^- \pi^0,$$

$$\Xi^- \rightarrow \Lambda \pi$$

$$\Lambda \rightarrow p \pi^-$$

where
and

- Mass of Ξ^- not constrained

$\Xi^* \rightarrow \Xi\pi^0$ update

- Inclusion of hybrid method for accidental subtraction
- Addressing various comments and suggestions

Accidental subtraction using hybrid method

Note: Error bars need to be fixed?

Ξ^* Analysis

- Requested studies:
 - Refine MC generator distributions
 - Status: Initial attempt with s and t distributions **will be shown today**
 - Mass fit Ξ for each bin in Ξ^*
 - Status: First attempt **will be shown today**
 - t -cut dependence on Ξ^* spectrum
 - Status: In progress
 - Vertex dependence on π^0 mass with real and MC data
 - Status: Started MC
 - Vertex angle between momentum and path of Ξ
 - Status: Not started yet
 - Explore sidebands as background shape under Ξ^*
 - Status: Not started yet

\mathcal{E}^* Generator Refinement

- Starting with code from Brandon build for $\mathcal{E}(1530)$ and modifying for general \mathcal{E}^*

Ξ^* Generator Refinement

- Starting with code from Brandon build for $\Xi(1530)$ and modifying for general Ξ^*
- Taking the initial reaction as $\gamma p \rightarrow K Y^*$

Ξ^* Generator Refinement

- Starting with code from Brandon build for $\Xi(1530)$ and modifying for general Ξ^*
- Taking the initial reaction as $\gamma p \rightarrow K Y^*$
- Mandelstam variables have relationship:
 - $s+t+u = m_\gamma^2 + m_p^2 + m_K^2 + m_{Y^*}^2$

Ξ^* Generator Refinement

- Starting with code from Brandon build for $\Xi(1530)$ and modifying for general Ξ^*
- Taking the initial reaction as $\gamma p \rightarrow K Y^*$
- Mandelstam variables have relationship:
 - $s+t+u = m_\gamma^2 + m_p^2 + m_K^2 + m_{Y^*}^2$
- We can lock down the kinematics of the initial reaction by specifying s , t and m_{Y^*}

E^* Generator Refinement

- Starting with code from Brandon build for $E(1530)$ and modifying for general E^*
- Taking the initial reaction as $\gamma p \rightarrow K Y^*$
- Mandelstam variables have relationship:
 - $s+t+u = m_\gamma^2 + m_p^2 + m_K^2 + m_{Y^*}^2$
- We can lock down the kinematics of the initial reaction by specifying s , t and m_{Y^*}
- Started with Mandelstam s and t

E^* Comparison of Reconstructed MC to Actual Data

Confidence level and pathlength significance

- Same confidence level cut: $CL > 10^{-6}$
- Same pathlength significance cut > 4

E^* Comparison of Reconstructed MC to Actual Data

Note: $s = 2E_\gamma m_p + m_p^2$

E^* Comparison of Reconstructed MC to Actual Data

- $-t(\text{fast})$ is being refined further

E^* Comparison of Reconstructed MC to Actual Data

Not yet tried to get the Y^* shape to match but the high-mass part of distribution already looks OK

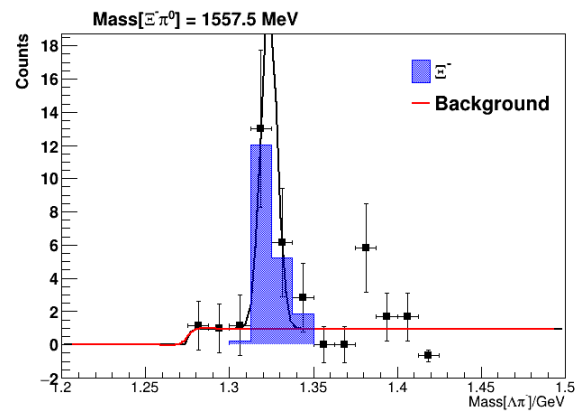

Ground State Ξ^- Fits

- Attempting to remove all non- Ξ^- background by fitting the Ξ^- for each mass[$\Xi^- \pi^0$] bin
- Since lifetime of Ξ^- is $1.6e-10$, I set width of the ground state Ξ^- to detector resolution found from Monte Carlo study.
- Some of the fits are not great, but we can still get a sense of the contribution to mass[$\Xi^- \pi^0$] from the non- Ξ^- background

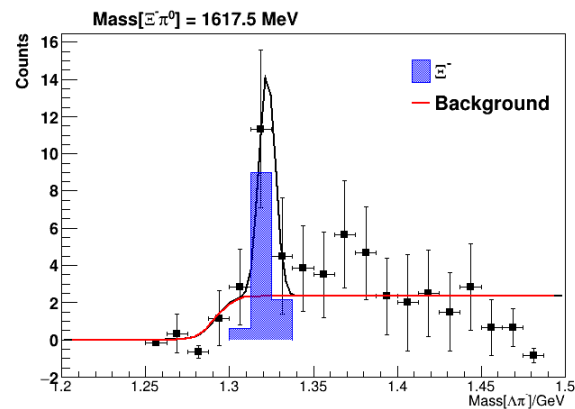

Ground State E^- Fits

From 1477.5 to 1557.5 MeV

Ground State E^- Fits

Next: From 1567.5 to 1647.5 MeV

Ground State E^- Fits

Next: From 1657.5 to 1737.5 MeV

Ground State E^- Fits

Last: From 1747.5 to 1777.5 MeV

Comparison of Mass[E^*]

$E(1690)$:

- Fits have shape of $E(1690)$ due entirely to detector resolution
- In general: Not enough statistics for the $E(1690)$
- If we can say anything at all, the best we can do for the $E(1690)$ will probably be an upper limit

$E(1620)$:

- With current statistics, the best we can do for the $E(1620)$ will probably be an upper limit

Comparison of Mass[Ξ^*]

- $\Xi(1530)$:
 - Center = 1536(2) MeV
 - Width = 13(17) MeV

Note: Error bars need to be fixed?

Comparison of Mass [Ξ^*]

- $\Xi(1530)$:
 - Center = 1536(2) MeV
 - Width = 13(17) MeV
